

## Pathfinders in Accuracy

What is the background to the intense pursuit of accuracy which lies behind much of the progress in modern engineering? A prominent part is played by the Coventry Gauge organisation where progress in precision is developed from the laboratory stage to meet the needs of Industry as a whole in the form of still more accurate gauges, measuring instruments, and machine tools.

*Coventry Gauge*

**COURTAULDS — THE GREATEST NAME IN RAYON**

*16 St. Martins-le-Grand, London, E.C.1.*

*Raising the standard of production everywhere*

As the wealth of a nation  is measured  
by the value  of the goods and services it produces,  
so is the worth of an industrial   
undertaking  judged by the value of its contribution  
to the national  production

**9** In the drive for higher productivity the Wickman Organisation is playing a leading role. Ranging from Wimet Cutting Tools to complete production units, Wickman Equipment is setting new standards of production everywhere—producing more with greater accuracy at less cost. The solution to your production problem may be among the Wickman range.

**WICKMAN MULTI-SPINDLE BAR AND CHUCKING AUTOMATICS**  
The incorporation of the Wickman patent autotsetting mechanism in these machines means faster change-over and reduced setting-up time—because there are NO cams to change. This Wickman feature brings cost-cutting automatic production within the scope of short run jobs. Capacities: Bar Machines,  $\frac{1}{2}$ ",  $1\frac{1}{2}$ ",  $1\frac{3}{4}$ " and  $2\frac{1}{4}$ ". Chucking Machines, 5" and 6".

**Other machines in the Wickman range**

**WICKMAN SLIDING HEAD PRECISION AUTOMATICS**  
Designed on the sliding headstock principle, feeds bar stock past five cam-operated tools—the ideal machine for rapid production of small accurate components. Capacities: 4 mm. and  $\frac{1}{16}$ ".

**WICKMAN OPTICAL PROFILE GRINDER**  
Grinds form tools, punches and die segments direct from drawing. Microscopic control during grinding assures accuracy of the most intricate contours. Tolerances of .0005" usual.

**WICKMAN GRINDING AND LAPPING MACHINES**  
For the off-hand grinding of tungsten carbide tools. In two sizes: Model 14C accommodating two 14" grit or diamond wheels to choice; Model 8B takes 8" wheels.

**PLANERS ELECTRIC PLANING MACHINE**  
Eight sizes from 6' x 30" x 30" to 12' x 54" x 54" bed dimensions.

**RYDER VERTICAL AUTO CHUCKING AUTOMATIC**  
Single, six and eight-spindle vertical lathes from 10 $\frac{1}{2}$ " to 20" maximum swing.

**CHATWOOD AUTOMATIC HOB GRINDER**  
For sharpening straight or helical gashed hobs and form-relieved cutters.

**WEBSTER & BENNETT VERTICAL TURNING & BORING MILLS**  
Available in 36", 48" and 60" sizes.

**Up to 1 H.P. for A.C.  
(single or polyphase)  
and D.C. supply circuits**

BTH fractional horsepower motors are second to none in quality and proved performance. All types are available in sizes to meet every domestic, commercial, and industrial need. Precision-built of highest grade components, and fully tested, they will give long and trouble-free service. Little attention is necessary beyond an occasional spot of oil, and this only when sleeve-bearings are preferred to grease-packed ball-bearings. Flameproof motors and slow-speed geared-units also available.

No manufacturer can offer a wider choice in fractional horsepower motors. Whatever the conditions of service or type of drive, there is a BTH motor well suited to the job.

The  1500

Back in the days of the earliest motor cars, Singers, with Coventry workmanship behind their enterprise, were pioneering the modern Age of the Wheel. Today a new Singer car, the S.M. 1500, is earning the praise of the Motoring Authorities. Its engine and gear-box are made where Singer's name was made — in Coventry.

*“Never for a moment, during the thirty-one years we have been working, have we devoted our attention to any form of localised machine. We took into consideration every world condition that exists.”*

—HARRY FERGUSON

**To meet the needs  
of farmers everywhere**  
*—under all conditions*

*The famous Ferguson Tractor—prime mover of the Ferguson System.*

ONE TRACTOR, one system, one agricultural method for farmers everywhere, under all conditions. That is the contribution of the Ferguson System of complete farm mechanisation. It is a contribution that gives farmers their first real chance to farm as they have always wanted to farm.

### **What is the Ferguson System?**

The Ferguson System consists of two parts: the Ferguson tractor and a Ferguson implement. Simple 3-point linkage and hydraulic control — both manual and automatic — co-ordinate the action of the tractor and implement. They work together as a single unit to provide these six advantages:

1. Traction without excess built-in weight.
2. Penetration without weight.
3. Hydraulic depth control of the implement.
4. Automatic protection from hidden obstructions.
5. Easy attachment of implements in one minute.
6. Tractor front end stays down—even up-hill.

The sum total of these advantages is easier farming, better farming, more profitable

farming. Today, farmers in 56 countries are proving that the Ferguson System enables them to produce more food at less cost — regardless of the size of their holdings, the nature of the soil or the type of crops grown.

*Ferguson tractors and implements for world-wide distribution are produced by the most modern methods and equipment. Tractors for the eastern hemisphere are produced in the 90-acre factory of The Standard Motor Co. Ltd., Coventry, England, and implements by foremost British manufacturers. Farmers in the western hemisphere are supplied from the great new 72-acre plant of Harry Ferguson, Inc., Detroit, Michigan, U.S.A.*
